KỸ NĂNG

- Core Technologies: Java 21, Go (Golang), Python
- Architecture: Microservices, Distributed Systems, Event-Driven Architecture, High Availability
- Cloud & Infrastructure: Kubernetes, Docker, AWS (EKS, RDS, S3), Kafka, CI/CD pipelines
- Databases: PostgreSQL, MongoDB, Redis, Cassandra

KINH NGHIỆM LÀM VIỆC

Principal Software Architect - Cloud Enterprise Solutions (2018 - Present)

- Designed and oversaw enterprise-grade distributed banking and high-throughput transaction backends in Java and Go.
- Led the migration of 40+ legacy monolith services to containerized Kubernetes microservices on AWS.
- Established CI/CD automation and event streaming with Apache Kafka handling 20,000 msg/sec.

Senior Backend Engineer - Global Telecom Systems (2012 - 2018)

- Built resilient REST and gRPC backend microservices in Java.
- Mentored 15+ backend engineers and established architectural review standards.
